Background:	The protein encoded by this gene is a member of the tripartite motif (TRIM) family. The TRIM motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. The function of this protein has not been identified. This gene lies within the major histocompatibility complex class I region on chromosome 6. Alternate splicing results in two transcript variants encoding different isoforms. HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY TRIM39 (Cat# [RC205987], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TRIM39 (Cat# [TA505761]). Positive lysates [LY406809] (100ug) and [LC406809] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (50ug per lane) from 8 different cell lines lysates by using anti-RNF23 antibody ([TA505761], 1:2000; 1mg/ml).
