#### ERG Mouse Monoclonal Antibody [Clone ID: OTI4H7] – TA506076

Background:This gene encodes a member of the erythroblast transformation-specific (ETS) family of<br/>transcriptions factors. All members of this family are key regulators of embryonic<br/>development, cell proliferation, differentiation, angiogenesis, inflammation, and apoptosis.<br/>The protein encoded by this gene is mainly expressed in the nucleus. It contains an ETS DNA-<br/>binding domain and a PNT (pointed) domain which is implicated in the self-association of<br/>chimeric oncoproteins. This protein is required for platelet adhesion to the subendothelium,<br/>inducing vascular cell remodeling. It also regulates hematopoesis, and the differentiation and<br/>maturation of megakaryocytic cells. This gene is involved in chromosomal translocations,<br/>resulting in different fusion gene products, such as TMPSSR2-ERG and NDRG1-ERG in<br/>prostate cancer, EWS-ERG in Ewing's sarcoma and FUS-ERG in acute myeloid leukemia.<br/>Multiple alternatively spliced transcript variants encoding different isoforms have been<br/>identified. HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY ERG (Cat# [RC208093], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ERG(Cat# TA506076). Positive lysates [LY403650] (100ug) and [LC403650] (20ug) can be purchased separately from OriGene.
