	Chromogranin A (CHGA) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1A3] – TA506097AM
Background:	The protein encoded by this gene is a member of the chromogranin/secretogranin family of neuroendocrine secretory proteins. It is found in secretory vesicles of neurons and endocrine cells. This gene product is a precursor to three biologically active peptides; vasostatin, pancreastatin, and parastatin. These peptides act as autocrine or paracrine negative modulators of the neuroendocrine system. Other peptides, including chromostatin, beta- granin, WE-14 and GE-25, are also derived from the full-length protein. However, biological activities for these molecules have not been shown. Synonyms:	CGA
Protein Families	: Druggable Genome, Secreted Protein

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CHGA ([RC200492], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CHGA. Positive lysates [LY400511] (100ug) and [LC400511] (20ug) can be purchased separately from OriGene.
