|             | DRP1 (DNM1L) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI3F4] – TA506112BM     |
|-------------|---|
| Background: | The protein encoded by this gene is a member of the dynamin superfamily of GTPases.         |
|             | Members of the dynamin-related subfamily, including the S. cerevisiae proteins Dnm1 and     |
|             | Vps1, contain the N-terminal tripartite GTPase domain but do not have the pleckstrin        |
|             | homology or proline-rich domains. This protein establishes mitochondrial morphology         |
|             | through a role in distributing mitochondrial tubules throughout the cytoplasm. The gene has |
|             | 3 alternatively spliced transcripts encoding different isoforms. These transcripts are      |

alternatively polyadenylated. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY DNM1L ([RC221708], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DNM1L. Positive lysates [LY402138] (100ug) and [LC402138] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-DNM1L monoclonal antibody (HepG2: human; HeLa: human; SVT2: mouse; A549: human; COS7: monkey; Jurkat: human; MDCK: canine; PC12: rat; MCF7: human) (1:200).
