### CD44 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI2D9] – TA506779AM

Background:The protein encoded by this gene is a cell-surface glycoprotein involved in cell-cell<br/>interactions, cell adhesion and migration. It is a receptor for hyaluronic acid (HA) and can also<br/>interact with other ligands, such as osteopontin, collagens, and matrix metalloproteinases<br/>(MMPs). This protein participates in a wide variety of cellular functions including lymphocyte<br/>activation, recirculation and homing, hematopoiesis, and tumor metastasis. Transcripts for<br/>this gene undergo complex alternative splicing that results in many functionally distinct<br/>isoforms, however, the full length nature of some of these variants has not been determined.<br/>Alternative splicing is the basis for the structural and functional diversity of this protein, and<br/>may be related to tumor metastasis. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CD44 ([RC221771], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CD44.
