Source IL1 alpha (IL1A) Mouse Monoclonal Antibody [Clone ID: OTI2F11] – TA506850M

- **Background:** The protein encoded by this gene is a member of the interleukin 1 cytokine family. This cytokine is a pleiotropic cytokine involved in various immune responses, inflammatory processes, and hematopoiesis. This cytokine is produced by monocytes and macrophages as a proprotein, which is proteolytically processed and released in response to cell injury, and thus induces apoptosis. This gene and eight other interleukin 1 family genes form a cytokine gene cluster on chromosome 2. It has been suggested that the polymorphism of these genes is associated with rheumatoid arthritis and Alzheimer's disease. [provided by RefSeq, Jul 2008]
- Synonyms: IL-1A; IL1; IL1-ALPHA; IL1F1

Protein Families: Druggable Genome, Secreted Protein
