# Product datasheet for TA507132

# Fibrinogen gamma chain (FGG) Mouse Monoclonal Antibody [Clone ID: OTI2D2]

## **Product data:**

| Product Type:           | Primary Antibodies   |
|-------------------------|--|
| Clone Name:             | OTI2D2   |
| Applications:           | IHC, WB  |
| Recommended Dilution:   | WB 1:400~4000, IHC 1:150   |
| Reactivity:             | Human, Monkey, Mouse   |
| Host:                   | Mouse  |
| lsotype:                | lgG1   |
| Clonality:              | Monoclonal   |
| Immunogen:              | Full length human recombinant protein of human FGG(NP_000500) produced in HEK293T<br>cell.                         |
| Formulation:            | PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.   |
| Concentration:          | 1 mg/ml  |
| Purification:           | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography<br>(protein A/G)       |
| Conjugation:            | Unconjugated   |
| Storage:                | Store at -20°C as received.  |
| Stability:              | Stable for 12 months from date of receipt.   |
| Predicted Protein Size: | 46.4 kDa   |
| Gene Name:              | fibrinogen gamma chain   |
| Database Link:          | <u>NP_000500</u><br><u>Entrez Gene 99571 MouseEntrez Gene 698363 MonkeyEntrez Gene 2266 Human</u><br><u>P02679</u> |

|                   | Fibrinogen gamma chain (FGG) Mouse Monoclonal Antibody [Clone ID: OTI2D2] – TA507132  |
|-------------------|---|
| Background:       | The protein encoded by this gene is the gamma component of fibrinogen, a blood-borne glycoprotein comprised of three pairs of nonidentical polypeptide chains. Following vascular injury, fibrinogen is cleaved by thrombin to form fibrin which is the most abundant component of blood clots. In addition, various cleavage products of fibrinogen and fibrin regulate cell adhesion and spreading, display vasoconstrictor and chemotactic activities, and are mitogens for several cell types. Mutations in this gene lead to several disorders, including dysfibrinogenemia, hypofibrinogenemia and thrombophilia. Alternative splicing results in two transcript variants encoding different isoforms. [provided by RefSeq, Jul |
| Synonyms:         | fibrinogen; fibrinogen gamma chain; gamma chain; gamma polypeptide  |
| Protein Families: | Druggable Genome, Secreted Protein, Transmembrane   |
| Protein Pathways  | s: Complement and coagulation cascades  |

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY FGG (Cat# [RC202770], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-FGG(Cat# TA507132). Positive lysates [LY400173] (100ug) and [LC400173] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-FGG monoclonal antibody (HepG2: human; HeLa: human; SVT2: mouse; A549: human; COS7: monkey; Jurkat: human; MDCK: canine; PC12: rat; MCF7: human).

Immunohistochemical staining of paraffinembedded Human Kidney tissue within the normal limits using anti-FGG mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.

Immunohistochemical staining of paraffinembedded Human liver tissue within the normal limits using anti-FGG mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.

Immunohistochemical staining of paraffinembedded Carcinoma of Human liver tissue using anti-FGG mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.
