	SPHK1 Mouse Monoclonal Antibody [Clone ID: OTI1A6] – TA507215M	
Background:	The protein encoded by this gene catalyzes the phosphorylation of sphingosine to form sphingosine-1-phosphate (S1P), a lipid mediator with both intra- and extracellular functions. Intracellularly, S1P regulates proliferation and survival, and extracellularly, it is a ligand for cell surface G protein-coupled receptors. This protein, and its product S1P, play a key role in TNF-alpha signaling and the NF-kappa-B activation pathway important in inflammatory, antiapoptotic, and immune processes. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2011]	
Synonyms:	SPHK	
Protein Families:	Druggable Genome	
Protein Pathway	<b>s:</b> Calcium signaling pathway, Fc gamma R-mediated phagocytosis, Metabolic pathways, Sphingolipid metabolism, VEGF signaling pathway

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY SPHK1 (Cat# [RC203398], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SPHK1(Cat# [TA507215]). Positive lysates [LY411847] (100ug) and [LC411847] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (30ug per lane) from 2 cell lines lysates by using anti-SPHK1 monoclonal antibody ([TA507215], 1:2000).
