Product datasheet for TA507248BM

Sterol carrier protein 2 (SCP2) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1D2]

Product data:

Product Type:	Primary Antibodies	
Clone Name:	OTI1D2	
Applications:	IHC, WB	
Recommended Dilution:	WB 1:4000, IHC 1:150	
Reactivity:	Human, Mouse, Rat	
Host:	Mouse	
lsotype:	lgG1	
Clonality:	Monoclonal	
Immunogen:	Full length human recombinant protein of human SCP2(NP_002970) produced in HEK293T cell.	
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol.	
Concentration:	0.5 mg/ml	
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)	
Conjugation:	HRP	
Storage:	Store at -20°C as received.	
Stability:	Stable for 12 months from date of receipt.	
Predicted Protein Size:	58.8 kDa	
Gene Name:	sterol carrier protein 2	
Database Link:	<u>NP_002970</u> <u>Entrez Gene 20280 MouseEntrez Gene 25541 RatEntrez Gene 6342 Human</u> <u>P22307</u>

	Sterol carrier protein 2 (SCP2) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1D2] – TA507248BM
Background:	This gene encodes two proteins: sterol carrier protein X (SCPx) and sterol carrier protein 2 (SCP2), as a result of transcription initiation from 2 independently regulated promoters. The transcript initiated from the proximal promoter encodes the longer SCPx protein, and the transcript initiated from the distal promoter encodes the shorter SCP2 protein, with the 2 proteins sharing a common C-terminus. Evidence suggests that the SCPx protein is a peroxisome-associated thiolase that is involved in the oxidation of branched chain fatty acids, while the SCP2 protein is thought to be an intracellular lipid transfer protein. This gene is highly expressed in organs involved in lipid metabolism, and may play a role in Zellweger syndrome, in which cells are deficient in peroxisomes and have impaired bile acid synthesis. Alternative splicing of this gene produces multiple transcript variants, some encoding different isoforms. [provided by RefSeq, Aug 2010]
Synonyms:	NLTP; NSL-TP; SCOX; SCP-2; SCP-CHI; SCP-X; SCPX

Protein Pathways: Metabolic pathways, PPAR signaling pathway, Primary bile acid biosynthesis

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY SCP2 (Cat# [RC219802], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SCP2 (Cat# [TA507248]). Positive lysates [LY401042] (100ug) and [LC401042] (20ug) can be purchased separately from OriGene.

Immunohistochemical staining of paraffinembedded Human Kidney tissue within the normal limits using anti-SCP2 mouse monoclonal antibody. (Heat-induced epitope retrieval by 1mM EDTA in 10mM Tris, pH8.5, 120°C for 3min, [TA507248])

Immunohistochemical staining of paraffinembedded Human liver tissue within the normal limits using anti-SCP2 mouse monoclonal antibody. (Heat-induced epitope retrieval by 1mM EDTA in 10mM Tris, pH8.5, 120°C for 3min, [TA507248])

Immunohistochemical staining of paraffinembedded Carcinoma of Human thyroid tissue using anti-SCP2 mouse monoclonal antibody. (Heat-induced epitope retrieval by 1mM EDTA in 10mM Tris, pH8.5, 120°C for 3min, [TA507248])
