### Serigene ALIX (PDCD6IP) Mouse Monoclonal Antibody [Clone ID: OTI1A4] – TA507312S

Background:This gene encodes a protein that functions within the ESCRT pathway in the abscission stage<br/>of cytokinesis, in intralumenal endosomal vesicle formation, and in enveloped virus budding.<br/>Studies using mouse cells have shown that overexpression of this protein can block<br/>apoptosis. In addition, the product of this gene binds to the product of the PDCD6 gene, a<br/>protein required for apoptosis, in a calcium-dependent manner. This gene product also binds<br/>to endophilins, proteins that regulate membrane shape during endocytosis. Overexpression<br/>of this gene product and endophilins results in cytoplasmic vacuolization, which may be<br/>partly responsible for the protection against cell death. Several alternatively spliced transcript<br/>variants encoding different isoforms have been found for this gene. Related pseudogenes<br/>have been identified on chromosome 15. HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY PDCD6IP (Cat# [RC203735], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PDCD6IP(Cat# [TA507312]). Positive lysates [LY415634] (100ug) and [LC415634] (20ug) can be purchased separately from OriGene.
