Gene Name:	amyloid beta precursor protein binding protein 2
Database Link:	NP_006371 Entrez Gene 10513 Human Q92624
Background:	The protein encoded by this gene interacts with microtubules and is functionally associated with beta-amyloid precursor protein transport and/or processing. The beta-amyloid precursor protein is a cell surface protein with signal-transducing properties, and it is thought to play a role in the pathogenesis of Alzheimer's disease. This gene has been found to be highly expressed in breast cancer. Multiple polyadenylation sites have been found for this gene.
Synonyms:	APP-BP2; HS.84084; PAT1
