Androgen Receptor (AR) Rabbit Monoclonal Antibody [Clone ID: OTIR20C9]

Product data:

Product Type: Primary Antibodies

Clone Name: OTIR20C9

Applications: IHC

Recommended Dilution: IHC 1:200

Reactivity: Human Rabbit

Isotype: IgG
Clonality: Monoclonal

Immunogen: A synthetic peptide corresponding to residues in the N-terminus of human

Formulation: PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.

Concentration: 1.00mg/ml

Purification: Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography

(protein A/G)

Conjugation: Unconjugated

Storage: Shipped at -20°C or with ice packs, Upon delivery store at -20°C. Dilute in PBS(pH7.3) if

necessary. Stable for 12 months from date of receipt. Avoid repeated freeze-thaws.

Predicted Protein Size: 99 kDa

Gene Name: androgen receptor

Database Link: NP 000035

Entrez Gene 367 Human

P10275

Background:

The androgen receptor gene is more than 90 kb long and codes for a protein that has 3 major functional domains: the N-terminal domain, DNA-binding domain, and androgen-binding domain. The protein functions as a steroid-hormone activated transcription factor. Upon binding the hormone ligand, the receptor dissociates from accessory proteins, translocates into the nucleus, dimerizes, and then stimulates transcription of androgen responsive genes. This gene contains 2 polymorphic trinucleotide repeat segments that encode polyglutamine and polyglycine tracts in the N-terminal transactivation domain of its protein. Expansion of the polyglutamine tract from the normal 9-34 repeats to the pathogenic 38-62 repeats causes spinal bulbar muscular atrophy (SBMA, also known as Kennedy's disease). Mutations in this gene are also associated with complete androgen insensitivity (CAIS). Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jan 2017]

Synonyms: AIS; AR8; DHTR; HUMARA; HYSP1; KD; NR3C4; SBMA; SMAX1; TFM

Protein Families: Druggable Genome, Nuclear Hormone Receptor, Transcription Factors

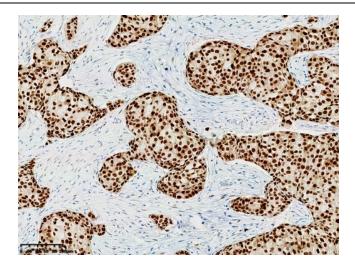

Protein Pathways: Oocyte meiosis, Pathways in cancer, Prostate cancer

Product images:

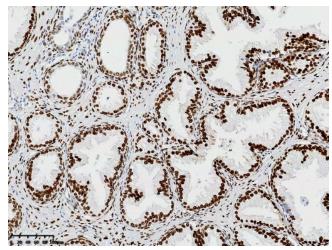

IHC staining of FFPE human breast tissue with in the normal limits using anti-AR rabbit monoclonal antibody (TA592771) and Polink-2 HRP polymer detection kit ([D22-110]). Heatinduced epitope retrieval by EDTA solution buffer pH 8.0 ([B04C-100]) at 120°C for 3 min. The brown stain indicates positive stain, blue is the counter stain.

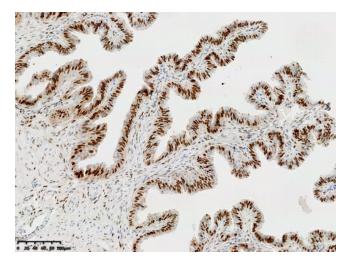

IHC staining of FFPE human breast cancer tissue using anti-AR rabbit monoclonal antibody (TA592771) and Polink-2 HRP polymer detection kit ([D22-110]). Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 ([B04C-100]) at 120°C for 3 min. The brown stain indicates positive stain, blue is the counter stain.

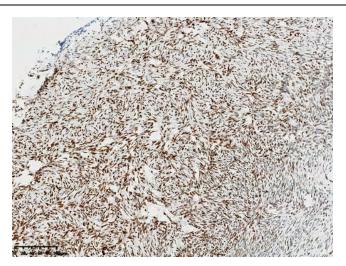

IHC staining of FFPE human prostate tissue with in the normal limits using anti-AR rabbit monoclonal antibody (TA592771) and Polink-2 HRP polymer detection kit ([D22-110]). Heatinduced epitope retrieval by EDTA solution buffer pH 8.0 ([B04C-100]) at 120°C for 3 min. The brown stain indicates positive stain, blue is the counter stain.

IHC staining of FFPE human fallopian tubet tissue with in the normal limits using anti-AR rabbit monoclonal antibody (TA592771) and Polink-2 HRP polymer detection kit ([D22-110]). Heatinduced epitope retrieval by EDTA solution buffer pH 8.0 ([B04C-100]) at 120°C for 3 min. The brown stain indicates positive stain, blue is the counter stain.

IHC staining of FFPE human ovarian sex cordstromal tumor tissue using anti-AR rabbit monoclonal antibody (TA592771) and Polink-2 HRP polymer detection kit ([D22-110]). Heatinduced epitope retrieval by EDTA solution buffer pH 8.0 ([B04C-100]) at 120°C for 3 min. The brown stain indicates positive stain, blue is the counter stain.
