kground:This gene encodes a nuclear-encoded mitochondrial metalloprotease protein that is a<br/>member of the AAA (ATPases associated with a variety of cellular activities) protein family.<br/>Members of this protein family share an ATPase domain and have roles in diverse cellular<br/>processes including membrane trafficking, intracellular motility, organelle biogenesis, protein<br/>folding, and proteolysis. Two transcript variants encoding distinct isoforms have been<br/>identified for this gene. Mutations associated with this gene cause autosomal recessive<br/>spastic paraplegia 7. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SPG7 ([RC206340], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SPG7. Positive lysates [LY401085] (100ug) and [LC401085] (20ug) can be purchased separately from OriGene.

Anti-SPG7 mouse monoclonal antibody (TA800002) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY SPG7 ([RC206340]).
