## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY AGTPBP1 ([RC209238], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-AGTPBP1. Positive lysates [LY414709] (100ug) and [LC414709] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC209238] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-AGTPBP1 antibody ([TA800230]), and then analyzed by flow cytometry.
