# Epoxide hydrolase (EPHX1) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI3F11] – TA800418BM

**Background:** Epoxide hydrolase is a critical biotransformation enzyme that converts epoxides from the

degradation of aromatic compounds to trans-dihydrodiols which can be conjugated and excreted from the body. Epoxide hydrolase functions in both the activation and detoxification of epoxides. Mutations in this gene cause preeclampsia, epoxide hydrolase deficiency or increased epoxide hydrolase activity. Alternatively spliced transcript variants encoding the

same protein have been found for this gene. [provided by RefSeq, Dec 2008]

Synonyms: EPHX; EPOX; HYL1; MEH

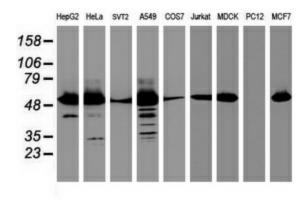

**Protein Families:** Druggable Genome, Protease

**Protein Pathways:** Metabolism of xenobiotics by cytochrome P450

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY EPHX1 ([RC200621], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-EPHX1. Positive lysates [LY400042] (100ug) and [LC400042] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-EPHX1 monoclonal antibody (HepG2: human; HeLa: human; SVT2: mouse; A549: human; COS7: monkey; Jurkat: human; MDCK: canine; PC12: rat; MCF7: human).
