CRIGENE BCL10 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI2G9] – TA800455AM

Background:	This gene was identified by its translocation in a case of mucosa-associated lymphoid tissue
	(MALT) lymphoma. The protein encoded by this gene contains a caspase recruitment domain
	(CARD), and has been shown to induce apoptosis and to activate NF-kappaB. This protein is
	reported to interact with other CARD domain containing proteins including CARD9, 10, 11 and
	14, which are thought to function as upstream regulators in NF-kappaB signaling. This protein
	is found to form a complex with MALT1, a protein encoded by another gene known to be
	translocated in MALT lymphoma. MALT1 and this protein are thought to synergize in the
	activation of NF-kappaB, and the deregulation of either of them may contribute to the same
	pathogenetic process that leads to the malignancy. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY BCL10 ([RC208752], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BCL10. Positive lysates [LY418351] (100ug) and [LC418351] (20ug) can be purchased separately from OriGene.
