SF3A1 Mouse Monoclonal Antibody [Clone ID: OTI1F10] – TA800462M

Background:This gene encodes subunit 1 of the splicing factor 3a protein complex. The splicing factor 3a
heterotrimer includes subunits 1, 2 and 3 and is necessary for the in vitro conversion of 15S
U2 snRNP into an active 17S particle that performs pre-mRNA splicing. Subunit 1 belongs to
the SURP protein family; named for the SURP (also called SWAP or Suppressor-of-White-
APricot) motifs that are thought to mediate RNA binding. Subunit 1 has tandemly repeated
SURP motifs in its amino-terminal half while its carboxy-terminal half contains a proline-rich
region and a ubiquitin-like domain. Binding studies with truncated subunit 1 derivatives
demonstrated that the two SURP motifs are necessary for binding to subunit 3 while contacts
with subunit 2 may occur through sequences carboxy-terminal to the SURP motifs.
Alternative splicing results in multiple transcript variants encoding different isoforms.

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SF3A1 ([RC201098], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SF3A1. Positive lysates [LY416998] (100ug) and [LC416998] (20ug) can be purchased separately from OriGene.
