#### **GRIGENE** MAGEB1 Mouse Monoclonal Antibody [Clone ID: OTI2B12] – TA800473

Background:This gene is a member of the MAGEB gene family. The members of this family have their<br/>entire coding sequences located in the last exon, and the encoded proteins show 50 to 68%<br/>sequence identity to each other. The promoters and first exons of the MAGEB genes show<br/>considerable variability, suggesting that the existence of this gene family enables the same<br/>function to be expressed under different transcriptional controls. This gene is localized in the<br/>DSS (dosage-sensitive sex reversal) critical region, and expressed in testis and in a significant<br/>fraction of tumors of various histological types. This gene and other MAGEB members are<br/>clustered on chromosome Xp22-p21. Multiple alternatively spliced transcript variants<br/>encoding the same protein have been found for this gene, however, the full length nature of<br/>some variants has not been defined. [provided by RefSeq]

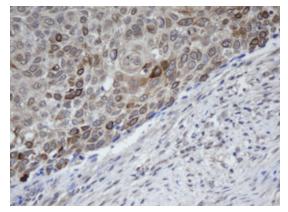

Synonyms:

CT3.1; DAM10; MAGE-Xp; MAGEL1

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MAGEB1 ([RC224906], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MAGEB1. Positive lysates [LY406154] (100ug) and [LC406154] (20ug) can be purchased separately from OriGene.

Immunohistochemical staining of paraffinembedded Carcinoma of Human bladder tissue using anti-MAGEB1 mouse monoclonal antibody. (Heat-induced epitope retrieval by 10mM citric buffer, pH6.0, 100°C for 10min, TA800473)
