# Product datasheet for TA800543AM

# SF3A1 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI7G6]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI7G6
Applications:	WB
Recommended Dilution:	WB 1:2000
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG2a
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 249-568 of human SF3A1 (NP_005868) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	0.5 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Biotin
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	88.7 kDa
Gene Name:	splicing factor 3a subunit 1
Database Link:	<u>NP_005868</u> <u>Entrez Gene 67465 MouseEntrez Gene 305479 RatEntrez Gene 10291 Human</u> <u>Q15459</u>

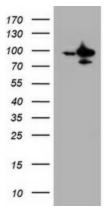

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### SF3A1 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI7G6] – TA800543AM

Background:This gene encodes subunit 1 of the splicing factor 3a protein complex. The splicing factor 3a<br/>heterotrimer includes subunits 1, 2 and 3 and is necessary for the in vitro conversion of 15S<br/>U2 snRNP into an active 17S particle that performs pre-mRNA splicing. Subunit 1 belongs to<br/>the SURP protein family; named for the SURP (also called SWAP or Suppressor-of-White-<br/>APricot) motifs that are thought to mediate RNA binding. Subunit 1 has tandemly repeated<br/>SURP motifs in its amino-terminal half while its carboxy-terminal half contains a proline-rich<br/>region and a ubiquitin-like domain. Binding studies with truncated subunit 1 derivatives<br/>demonstrated that the two SURP motifs are necessary for binding to subunit 3 while contacts<br/>with subunit 2 may occur through sequences carboxy-terminal to the SURP motifs.<br/>Alternative splicing results in multiple transcript variants encoding different isoforms.<br/>[provided by RefSeq, Jul 2008]

Synonyms:	PRP21; PRPF21; SAP114; SF3A120
Protein Families:	Druggable Genome
Protein Pathways:	Spliceosome

#### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SF3A1 ([RC201098], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SF3A1. Positive lysates [LY416998] (100ug) and [LC416998] (20ug) can be purchased separately from OriGene.
