### CRIGENE TIA1 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1C4] – TA800667AM

Background:The product encoded by this gene is a member of a RNA-binding protein family and<br/>possesses nucleolytic activity against cytotoxic lymphocyte (CTL) target cells. It has been<br/>suggested that this protein may be involved in the induction of apoptosis as it preferentially<br/>recognizes poly(A) homopolymers and induces DNA fragmentation in CTL targets. The major<br/>granule-associated species is a 15-kDa protein that is thought to be derived from the<br/>carboxyl terminus of the 40-kDa product by proteolytic processing. Alternative splicing<br/>resulting in different isoforms of this gene product has been described in the literature.<br/>[provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TIA1 ([RC219386], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TIA1. Positive lysates [LY411728] (100ug) and [LC411728] (20ug) can be purchased separately from OriGene.
