Background:	This gene encodes a member of the Armadillo protein family, which function in adhesion between cells and signal transduction. Multiple translation initiation codons and alternative splicing result in many different isoforms being translated. Not all of the full-length natures of the described transcript variants have been determined. Read-through transcription also exists between this gene and the neighboring upstream thioredoxin-related transmembrane protein 2 (TMX2) gene. [provided by RefSeq, Dec 2010]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CTNND1 ([RC222771], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CTNND1. Positive lysates [LY421307] (100ug) and [LC421307] (20ug) can be purchased separately from OriGene.

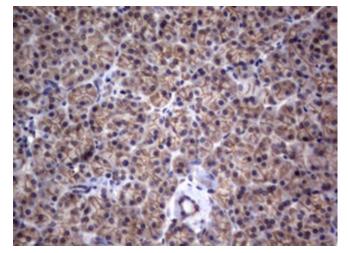

Western blot analysis of extracts (35ug) from different cell line by using anti-CTNND1 monoclonal antibody (1:500).

Equivalent amounts of cell lysates (10 ug per lane) of wild-type Hela cells (WT, Cat# LC810HELA) and CTNND1-Knockout Hela cells (KO, Cat# [LC810057]) were separated by SDS-PAGE and immunoblotted with anti-CTNND1 monoclonal antibody [TA800805]. Then the blotted membrane was stripped and reprobed with antib-actin antibody ([TA811000]) as a loading control (1:500).

Immunohistochemical staining of paraffinembedded Human pancreas tissue within the normal limits using anti-CTNND1 mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.
