	PCNA Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI2G7] – TA800875BM
Background:	The protein encoded by this gene is found in the nucleus and is a cofactor of DNA polymerase delta. The encoded protein acts as a homotrimer and helps increase the processivity of leading strand synthesis during DNA replication. In response to DNA damage, this protein is ubiquitinated and is involved in the RAD6-dependent DNA repair pathway. Two transcript variants encoding the same protein have been found for this gene. Pseudogenes of this gene have been described on chromosome 4 and on the X chromosome. [provided by RefSeq, Jul 2008]
Synonyms:	ATLD2
Protein Families:	Druggable Genome, Stem cell - Pluripotency
Protein Pathway	s: Base excision repair, Cell cycle, DNA replication, Mismatch repair, Nucleotide excision repair

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PCNA ([RC201741], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PCNA. Positive lysates [LY400929] (100ug) and [LC400929] (20ug) can be purchased separately from OriGene.
