Cytokeratin 5 (KRT5) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI4H8] – TA801104AM

chromosome 12q12-q13. [provided by RefSeq, Jul 2008]

Background:The protein encoded by this gene is a member of the keratin gene family. The type II
cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic
keratin chains coexpressed during differentiation of simple and stratified epithelial tissues.
This type II cytokeratin is specifically expressed in the basal layer of the epidermis with family
member KRT14. Mutations in these genes have been associated with a complex of diseases
termed epidermolysis bullosa simplex. The type II cytokeratins are clustered in a region of
