| Background: | This gene encodes an angiogenic factor which promotes angiogenesis in vivo and stimulates the in vitro growth of a variety of endothelial cells. It has a highly restricted target cell specificity acting only on endothelial cells. Mutations in this gene have been associated with mitochondrial neurogastrointestinal encephalomyopathy. Multiple alternatively spliced transcript variants have been identified. [provided by RefSeq, Apr 2012] |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TYMP ([RC202170], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TYMP. Positive lysates [LY419632] (100ug) and [LC419632] (20ug) can be purchased separately from OriGene.

Equivalent amounts of cell lysates (10 ug per lane) of wild-type HeLa cells (WT, Cat# LC810HELA) and TYMP-Knockout HeLa cells (KO, Cat# [LC831279]) were separated by SDS-PAGE and immunoblotted with anti-TYMP monoclonal antibody [TA801109] (1:500`). Then the blotted membrane was stripped and reprobed with anti-HSP90 antibody as a loading control.
