Vimentin (VIM) Mouse Monoclonal Antibody [Clone ID: OTI1G6] - TA801360SBackground:This gene encodes a member of the intermediate filament family. Intermediate filamentents,
along with microtubules and actin microfilaments, make up the cytoskeleton. The protein
encoded by this gene is responsible for maintaining cell shape, integrity of the cytoplasm, and
stabilizing cytoskeletal interactions. It is also involved in the immune response, and controls
the transport of low-density lipoprotein (LDL)-derived cholesterol from a lysosome to the site
of esterification. It functions as an organizer of a number of critical proteins involved in
attachment, migration, and cell signaling. Mutations in this gene causes a dominant,
pulverulent cataract. [provided by RefSeq, Jun 2009]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY VIM ([RC201546], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-VIM. Positive lysates [LY401165] (100ug) and [LC401165] (20ug) can be purchased separately from OriGene.
