| Background:             | This gene is a member of the visinin/recoverin subfamily of neuronal calcium sensor<br>proteins. The encoded protein is strongly expressed in granule cells of the cerebellum where<br>it associates with membranes in a calcium-dependent manner and modulates intracellular<br>signaling pathways of the central nervous system by directly or indirectly regulating the<br>activity of adenylyl cyclase. Alternatively spliced transcript variants have been observed, but<br>their full-length nature has not been determined. [provided by RefSeq, Jul 2008] |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY VSNL1 ([RC205337], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-VSNL1. Positive lysates [LY418720] (100ug) and [LC418720] (20ug) can be purchased separately from OriGene.
