# Product datasheet for TA801971

### PAX5 Mouse Monoclonal Antibody [Clone ID: OTI1H5]

### **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI1H5
Applications:	IHC
Recommended Dilution:	IHC 1:200
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG2a
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human PAX5 (NP_057953) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	42 kDa
Gene Name:	paired box 5
Database Link:	<u>NP_057953</u> <u>Entrez Gene 18507 MouseEntrez Gene 500453 RatEntrez Gene 5079 Human</u> <u>Q02548</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

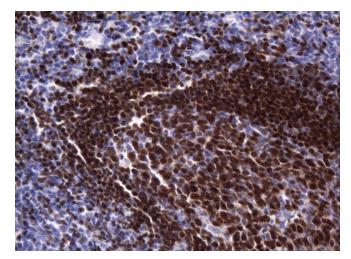

#### Serigene PAX5 Mouse Monoclonal Antibody [Clone ID: OTI1H5] – TA801971

Background:This gene encodes a member of the paired box (PAX) family of transcription factors. The<br/>central feature of this gene family is a novel, highly conserved DNA-binding motif, known as<br/>the paired box. Paired box transcription factors are important regulators in early<br/>development, and alterations in the expression of their genes are thought to contribute to<br/>neoplastic transformation. This gene encodes the B-cell lineage specific activator protein that<br/>is expressed at early, but not late stages of B-cell differentiation. Its expression has also been<br/>detected in developing CNS and testis and so the encoded protein may also play a role in<br/>neural development and spermatogenesis. This gene is located at 9p13, which is involved in<br/>t(9;14)(p13;q32) translocations recurring in small lymphocytic lymphomas of the<br/>plasmacytoid subtype, and in derived large-cell lymphomas. This translocation brings the<br/>potent E-mu enhancer of the IgH gene into close proximity of the PAX5 promoter, suggesting<br/>that the deregulation of transcription of this gene contributes to the pathogenesis of these<br/>lymphomas. Alternative splicing results in multiple transcript variants encoding different<br/>isoforms. [provided by RefSeq, Jul 2013]

Synonyms: ALL3; BSAP

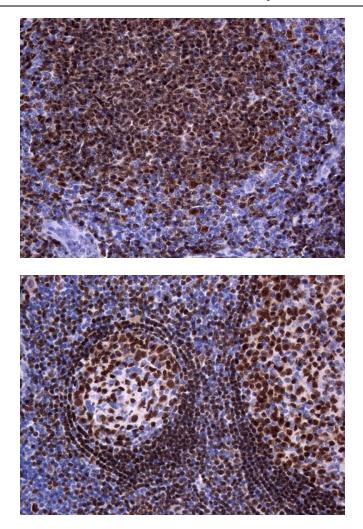

Protein Families: Transcription Factors
