GRIGENE DDIT3 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI2D3] – TA802218AM

- Background:This gene encodes a member of the CCAAT/enhancer-binding protein (C/EBP) family of
transcription factors. The protein functions as a dominant-negative inhibitor by forming
heterodimers with other C/EBP members, such as C/EBP and LAP (liver activator protein), and
preventing their DNA binding activity. The protein is implicated in adipogenesis and
erythropoiesis, is activated by endoplasmic reticulum stress, and promotes apoptosis. Fusion
of this gene and FUS on chromosome 16 or EWSR1 on chromosome 22 induced by
translocation generates chimeric proteins in myxoid liposarcomas or Ewing sarcoma.
Multiple alternatively spliced transcript variants encoding two isoforms with different length
have been identified. [provided by RefSeq, Aug 2010]
- Synonyms:CEBPZ; CHOP; CHOP-10; CHOP10; GADD153Protein Families:Druggable Genome, Transcription Factors

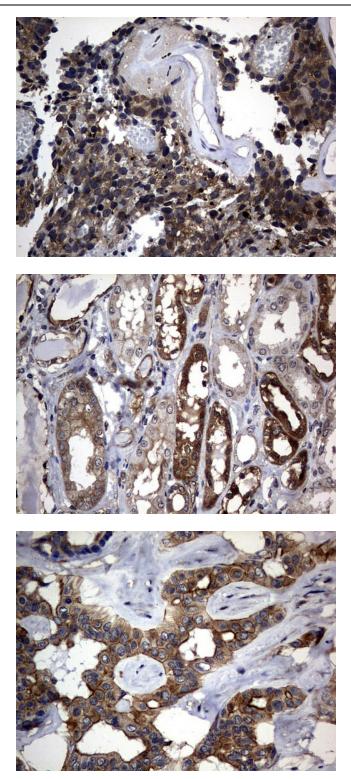

Protein Pathways: MAPK signaling pathway

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY DDIT3 (Cat# [RC231040], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DDIT3 (Cat# [TA802218])(1:500).
