Product datasheet for TA802283M

TGIF (TGIF1) Mouse Monoclonal Antibody [Clone ID: OTI4D10]

Product data:

Product Type:	Primary Antibodies
Clone Name:	OTI4D10
Applications:	WB
Recommended Dilution:	WB 1:2000
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human TGIF1 (NP_775300) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	29.6 kDa
Gene Name:	TGFB induced factor homeobox 1
Database Link:	<u>NP_775300</u> <u>Entrez Gene 21815 MouseEntrez Gene 316742 RatEntrez Gene 7050 Human</u> <u>Q15583</u>

GRIGENE TGIF (TGIF1) Mouse Monoclonal Antibody [Clone ID: OTI4D10] – TA802283M

Background: The protein encoded by this gene is a member of the three-amino acid loop extension (TALE) superclass of atypical homeodomains. TALE homeobox proteins are highly conserved transcription regulators. This particular homeodomain binds to a previously characterized retinoid X receptor responsive element from the cellular retinol-binding protein II promoter. In addition to its role in inhibiting 9-cis-retinoic acid-dependent RXR alpha transcription activation of the retinoic acid responsive element, the protein is an active transcriptional corepressor of SMAD2 and may participate in the transmission of nuclear signals during development and in the adult. Mutations in this gene are associated with holoprosencephaly type 4, which is a structural anomaly of the brain. Alternative splicing has been observed at this locus and eight variants, encoding four distinct isoforms, are described. [provided by RefSeq, Jul 2008]

Synonyms: HPE4; TGIF

Protein Families:Druggable Genome, Stem cell - Pluripotency, Stem cell relevant signaling - TGFb/BMPsignaling pathway, Transcription Factors

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TGIF1 ([RC201549], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TGIF1. Positive lysates [LY406653] (100ug) and [LC406653] (20ug) can be purchased separately from OriGene.
