### Serigene PARN Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI4C9] – TA802653AM

Background:The protein encoded by this gene is a 3'-exoribonuclease, with similarity to the RNase D<br/>family of 3'-exonucleases. It prefers poly(A) as the substrate, hence, efficiently degrades<br/>poly(A) tails of mRNAs. Exonucleolytic degradation of the poly(A) tail is often the first step in<br/>the decay of eukaryotic mRNAs. This protein is also involved in silencing of certain maternal<br/>mRNAs during oocyte maturation and early embryonic development, as well as in nonsense-<br/>mediated decay (NMD) of mRNAs that contain premature stop codons. Alternatively spliced<br/>transcript variants encoding different isoforms have been found for this gene. [provided by<br/>RefSeq, Aug 2008]

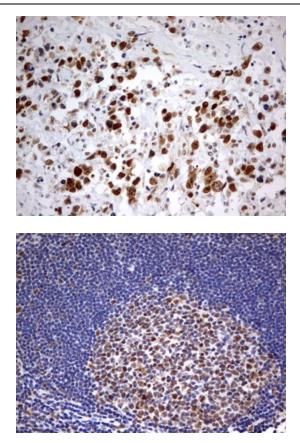

Synonyms:	DAN
Protein Families:	Transcription Factors

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PARN ([RC207220], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PARN. Positive lysates [LY419233] (100ug) and [LC419233] (20ug) can be purchased separately from OriGene.
