Product datasheet for TA802780

Macrophage Scavenger Receptor I (MSR1) Mouse Monoclonal Antibody [Clone ID: OTI5A6]

Product data:

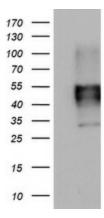

| Product Type: | Primary Antibodies |
|-------------------------|---|
| Clone Name: | OTI5A6 |
| Applications: | WB |
| Recommended Dilution: | WB 1:2000 |
| Reactivity: | Human |
| Host: | Mouse |
| lsotype: | lgG1 |
| Clonality: | Monoclonal |
| Immunogen: | Human recombinant protein fragment corresponding to amino acids 197-451 of human MSR1(NP_619730) produced in E.coli. |
| Formulation: | PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide. |
| Concentration: | 1 mg/ml |
| Purification: | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G) |
| Conjugation: | Unconjugated |
| Storage: | Store at -20°C as received. |
| Stability: | Stable for 12 months from date of receipt. |
| Predicted Protein Size: | 42.8 kDa |
| Gene Name: | macrophage scavenger receptor 1 |
| Database Link: | <u>NP_619730</u> <u>Entrez Gene 4481 Human</u> <u>P21757</u> |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

| | Macrophage Scavenger Receptor I (MSR1) Mouse Monoclonal Antibody [Clone ID: OTI5A6] – TA802780 |
|------------------|---|
| Background: | This gene encodes the class A macrophage scavenger receptors, which include three different types (1, 2, 3) generated by alternative splicing of this gene. These receptors or isoforms are macrophage-specific trimeric integral membrane glycoproteins and have been implicated in many macrophage-associated physiological and pathological processes including atherosclerosis, Alzheimer's disease, and host defense. The isoforms type 1 and type 2 are functional receptors and are able to mediate the endocytosis of modified low density lipoproteins (LDLs). The isoform type 3 does not internalize modified LDL (acetyl-LDL) despite having the domain shown to mediate this function in the types 1 and 2 isoforms. It has an altered intracellular processing and is trapped within the endoplasmic reticulum, making it unable to perform endocytosis. The isoform type 3 can inhibit the function of isoforms type 1 and type 2 when co-expressed, indicating a dominant negative effect and suggesting a mechanism for regulation of scavenger receptor activity in macrophages. [provided by RefSeq, Jul 2008] |
| Synonyms: | CD204; phSR1; phSR2; SCARA1; SR-A; SRA |
| Protein Families | : Druggable Genome, Transmembrane |

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MSR1 ([RC223314], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MSR1. Positive lysates [LY408527] (100ug) and [LC408527] (20ug) can be purchased separately from OriGene.
