#### **GRIGENE** DAP3 Mouse Monoclonal Antibody [Clone ID: OTI2D4] – TA802818

Background:Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in<br/>protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes)<br/>consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein<br/>to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed.<br/>Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that<br/>the latter contain a 5S rRNA. Among different species, the proteins comprising the<br/>mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which<br/>prevents easy recognition by sequence homology. This gene encodes a 28S subunit protein<br/>that also participates in apoptotic pathways which are initiated by tumor necrosis factor-<br/>alpha, Fas ligand, and gamma interferon. This protein S27. Multiple alternatively spliced<br/>transcript variants encoding distinct isoforms have been found for this gene. Pseudogenes<br/>corresponding to this gene are found on chromosomes 1q and 2q. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY DAP3 ([RC223182], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DAP3. Positive lysates [LY403256] (100ug) and [LC403256] (20ug) can be purchased separately from OriGene.
