# Product datasheet for TA802838

## MRPS11 Mouse Monoclonal Antibody [Clone ID: OTI3F1]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI3F1
Applications:	WB
Recommended Dilution:	WB 1:2000
Reactivity:	Human
Host:	Mouse
lsotype:	lgG2a
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human MRPS11 (NP_073750) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	20.4 kDa
Gene Name:	mitochondrial ribosomal protein S11
Database Link:	<u>NP_073750</u> <u>Entrez Gene 64963 Human</u> <u>P82912</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Serigene MRPS11 Mouse Monoclonal Antibody [Clone ID: OTI3F1] – TA802838

Background:Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in<br/>protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes)<br/>consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein<br/>to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed.<br/>Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that<br/>the latter contain a 5S rRNA. Among different species, the proteins comprising the<br/>mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which<br/>prevents easy recognition by sequence homology. This gene encodes a 28S subunit protein<br/>that contains a high level of sequence similarity with ribosomal protein S11P family members.<br/>A pseudogene corresponding to this gene is found on chromosome 20. Sequence analysis<br/>identified two transcript variants that encode different protein isoforms. [provided by RefSeq,<br/>Jul

Synonyms:

HCC-2

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MRPS11 ([RC207075], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MRPS11. Positive lysates [LY411534] (100ug) and [LC411534] (20ug) can be purchased separately from OriGene.
