	Cytokeratin 7 (KRT7) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1C5] – TA802932BM
Background:	The protein encoded by this gene is a member of the keratin gene family. The type II
	cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic keratin chains coexpressed during differentiation of simple and stratified epithelial tissues.
	This type II cytokeratin is specifically expressed in the simple epithelia lining the cavities of

the internal organs and in the gland ducts and blood vessels. The genes encoding the type II cytokeratins are clustered in a region of chromosome 12q12-q13. Alternative splicing may result in several transcript variants; however, not all variants have been fully described. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY KRT7 ([RC201124], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-KRT7. Positive lysates [LY401707] (100ug) and [LC401707] (20ug) can be purchased separately from OriGene.
