## **GRIGENE** Cytokeratin 7 (KRT7) Mouse Monoclonal Antibody [Clone ID: OTI1B3] – TA803026

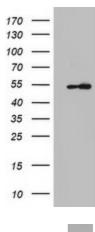

Background:The protein encoded by this gene is a member of the keratin gene family. The type II<br/>cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic<br/>keratin chains coexpressed during differentiation of simple and stratified epithelial tissues.<br/>This type II cytokeratin is specifically expressed in the simple epithelia lining the cavities of<br/>the internal organs and in the gland ducts and blood vessels. The genes encoding the type II<br/>cytokeratins are clustered in a region of chromosome 12q12-q13. Alternative splicing may<br/>result in several transcript variants; however, not all variants have been fully described.<br/>[provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY KRT7 ([RC201124], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-KRT7.

Western blot analysis of A549 cell lysate (35ug) by using anti-KRT7 monoclonal antibody. Dilution: 1:500
