CRIGENE TTF1 (NKX2-1) Mouse Monoclonal Antibody [Clone ID: OTI15E3] – TA803320M

en thy in r cho ma iso ger	is gene encodes a protein initially identified as a thyroid-specific transcription factor. The coded protein binds to the thyroglobulin promoter and regulates the expression of proid-specific genes but has also been shown to regulate the expression of genes involved morphogenesis. Mutations and deletions in this gene are associated with benign hereditary prea, choreoathetosis, congenital hypothyroidism, and neonatal respiratory distress, and ny be associated with thyroid cancer. Multiple transcript variants encoding different forms have been found for this gene. This gene shares the symbol/alias 'TFF1' with another ne, transcription termination factor 1, which plays a role in ribosomal gene transcription. ovided by RefSeq, Apr

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY NKX2-1 ([RC217520], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-NKX2-1. Positive lysates [LY401141] (100ug) and [LC401141] (20ug) can be purchased separately from OriGene.
