Entrez Gene 14466 MouseEntrez Gene 2629 Human

P04062

**Background:** This gene encodes a lysosomal membrane protein that cleaves the beta-glucosidic linkage of

glycosylceramide, an intermediate in glycolipid metabolism. Mutations in this gene cause

Gaucher disease, a lysosomal storage disease characterized by an accumulation of

glucocerebrosides. A related pseudogene is approximately 12 kb downstream of this gene on

chromosome 1. Alternative splicing results in multiple transcript variants. [provided by

RefSeq, Jan 2010]

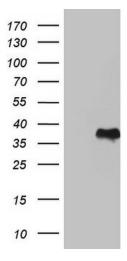

Synonyms: GBA1; GCB; GLUC

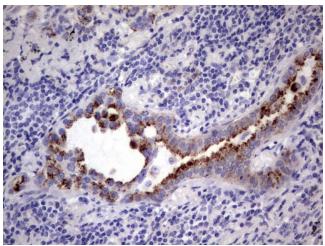

**Protein Families:** Druggable Genome

Protein Pathways: Lysosome, Metabolic pathways, Other glycan degradation, Sphingolipid metabolism
