Service APC Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI2B8] – TA803655AM

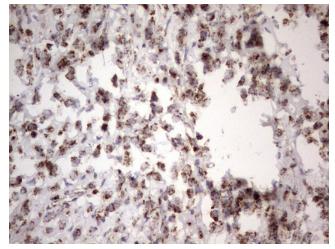

Background:	This gene encodes a tumor suppressor protein that acts as an antagonist of the Wnt signaling pathway. It is also involved in other processes including cell migration and adhesion, transcriptional activation, and apoptosis. Defects in this gene cause familial adenomatous polyposis (FAP), an autosomal dominant pre-malignant disease that usually progresses to malignancy. Disease-associated mutations tend to be clustered in a small region designated the mutation cluster region (MCR) and result in a truncated protein product. [provided by RefSeq, Jul 2008]
Synonyms:	BTPS2; DP2; DP2.5; DP3; GS; PPP1R46
Protein Families:	Druggable Genome

Protein Pathways:Basal cell carcinoma, Colorectal cancer, Endometrial cancer, Pathways in cancer, Regulation
of actin cytoskeleton, Wnt signaling pathway
