	ACE2 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI4D2] (Angiotensin Converting Enzyme 2) – TA803841AM
Background:	The protein encoded by this gene belongs to the angiotensin-converting enzyme family of dipeptidyl carboxydipeptidases and has considerable homology to human angiotensin 1 converting enzyme. This secreted protein catalyzes the cleavage of angiotensin I into angiotensin 1-9, and angiotensin II into the vasodilator angiotensin 1-7. The organ- and cell-specific expression of this gene suggests that it may play a role in the regulation of cardiovascular and renal function, as well as fertility. In addition, the encoded protein is a functional receptor for the spike glycoprotein of the human coronaviruses SARS and HCoV-NL63. [provided by RefSeq, Jul 2008]
Synonyms:	ACEH
Protein Families:	Druggable Genome, Secreted Protein, Transmembrane
Protein Pathway	s: Renin-angiotensin system
