GRIGENE Cytokeratin 19 (KRT19) Mouse Monoclonal Antibody [Clone ID: OTI1E7] – TA803859

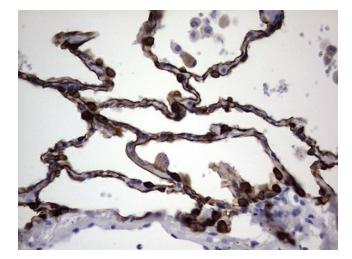

Background:The protein encoded by this gene is a member of the keratin family. The keratins are
intermediate filament proteins responsible for the structural integrity of epithelial cells and
are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic
proteins which are arranged in pairs of heterotypic keratin chains. Unlike its related family
members, this smallest known acidic cytokeratin is not paired with a basic cytokeratin in
epithelial cells. It is specifically expressed in the periderm, the transiently superficial layer that
envelopes the developing epidermis. The type I cytokeratins are clustered in a region of
chromosome 17q12-q21. [provided by RefSeq, Jul 2008]
