Cytokeratin 19 (KRT19) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1E7] TA803859AM Background: The protein encoded by this gene is a member of the keratin family. The keratins are Interpretent of the sector of

intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. Unlike its related family members, this smallest known acidic cytokeratin is not paired with a basic cytokeratin in epithelial cells. It is specifically expressed in the periderm, the transiently superficial layer that envelopes the developing epidermis. The type I cytokeratins are clustered in a region of chromosome 17q12-q21.
