**Background:** This gene belongs to the DAZ gene family required for germ cell development. It encodes an

RNA-binding protein which is more similar to Drosophila Boule than to human proteins encoded by genes DAZ (deleted in azoospermia) or DAZL (deleted in azoospermia-like). Loss of this gene function results in the absence of sperm in semen (azoospermia). Histological studies demonstrated that the primary defect is at the meiotic G2/M transition. Two

alternatively spliced transcript variants encoding distinct isoforms have been found for this

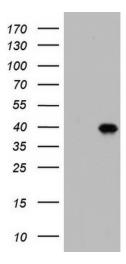

gene. [provided by RefSeq, Jul 2008]

Synonyms: BOULE

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY BOLL ([RC207436], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BOLL. Positive lysates [LY409790] (100ug) and [LC409790] (20ug) can be purchased separately from OriGene.
