	CSEN (KCNIP3) Mouse Monoclonal Antibody [Clone ID: OTI3A12] – TA804386S	
Background:	This gene encodes a member of the family of voltage-gated potassium (Kv) channel- interacting proteins, which belong to the recoverin branch of the EF-hand superfamily. Members of this family are small calcium binding proteins containing EF-hand-like domains. They are integral subunit components of native Kv4 channel complexes that may regulate A- type currents, and hence neuronal excitability, in response to changes in intracellular calcium. The encoded protein also functions as a calcium-regulated transcriptional repressor, and interacts with presenilins. Alternatively spliced transcript variants encoding different isoforms have been described. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY KCNIP3 (Cat# [RC203957], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-KCNIP3 (1:500) (Cat# [TA804386]). Positive lysates [LY415545] (100ug) and [LC415545] (20ug) can be purchased separately from OriGene.
