	DCC Mouse Monoclonal Antibody [Clone ID: OTI4A1] – TA804515S			
Background:	This gene encodes a netrin 1 receptor. The transmembrane protein is a member of the immunoglobulin superfamily of cell adhesion molecules, and mediates axon guidance of neuronal growth cones towards sources of netrin 1 ligand. The cytoplasmic tail interacts with the tyrosine kinases Src and focal adhesion kinase (FAK, also known as PTK2) to mediate axon attraction. The protein partially localizes to lipid rafts, and induces apoptosis in the absence of ligand. The protein functions as a tumor suppressor, and is frequently mutated or downregulated in colorectal cancer and esophageal carcinoma. [provided by RefSeq, Oct 2009]			
Synonyms:	CRC18; CRCR1; IGDCC1; MRMV1; NTN1R1			
Protein Families:	Druggable Genome, Transmembrane			
Protein Pathways	s: Axon guidance, Colorectal cancer, Pathways in cancer

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY DCC (Cat# [RC218506], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DCC(Cat# [TA804515]). Positive lysates [LY417439] (100ug) and [LC417439] (20ug) can be purchased separately from OriGene.
