# Product datasheet for TA804866M

# hHR23b (RAD23B) Mouse Monoclonal Antibody [Clone ID: OTI7C5]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI7C5
Applications:	WB
Recommended Dilution:	WB 1:500
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 1-253 of human RAD23B (NP_002865) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	43 kDa
Gene Name:	RAD23 homolog B, nucleotide excision repair protein
Database Link:	<u>NP_002865</u> <u>Entrez Gene 19359 MouseEntrez Gene 298012 RatEntrez Gene 5887 Human</u> <u>P54727</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Scheme Generation (RAD23B) Mouse Monoclonal Antibody [Clone ID: OTI7C5] – TA804866M

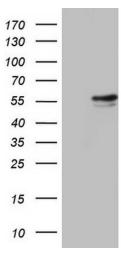

Background:The protein encoded by this gene is one of two human homologs of Saccharomyces<br/>cerevisiae Rad23, a protein involved in the nucleotide excision repair (NER). This protein was<br/>found to be a component of the protein complex that specifically complements the NER<br/>defect of xeroderma pigmentosum group C (XP-c) cell extracts in vitro. This protein was also<br/>shown to interact with, and elevate the nucleotide excision activity of 3-methyladenine-DNA<br/>glycosylase (MPG), which suggested a role in DNA damage recognition in base excision repair.<br/>This protein contains an N-terminal ubiquitin-like domain, which was reported to interact<br/>with 26S proteasome, and thus this protein may be involved in the ubiquitin mediated<br/>proteolytic pathway in cells. Alternative splicing results in multiple transcript variants<br/>encoding distinct isoforms. [provided by RefSeq, Sep 2011]

Synonyms:	HHR23B; HR23B; P58

Protein Families: Druggable Genome

Protein Pathways: Nucleotide excision repair

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY RAD23B ([RC202185], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-RAD23B. Positive lysates [LY401012] (100ug) and [LC401012] (20ug) can be purchased separately from OriGene.
