# **Product datasheet for TA804906**

# Lipin 3 (LPIN3) Mouse Monoclonal Antibody [Clone ID: OTI1C8]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI1C8
Applications:	WB
Recommended Dilution:	WB 1:2000
Reactivity:	Human
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human LPIN3 (NP_075047) produced in HEK293T cell.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	93.4 kDa
Gene Name:	lipin 3
Database Link:	<u>NP_075047</u> <u>Entrez Gene 64900 Human</u> <u>Q9BQK8</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Serigene Lipin 3 (LPIN3) Mouse Monoclonal Antibody [Clone ID: OTI1C8] – TA804906

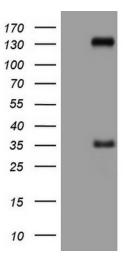

Background:Humans lipodystrophy is characterized by loss of body fat, fatty liver, hypertriglyceridemia,<br/>and insulin resistance. Mice carrying mutations in the fatty liver dystrophy (fld) gene have<br/>similar phenotypes. Through positional cloning, the mouse gene responsible for fatty liver<br/>dystrophy was isolated and designated Lpin1. The nuclear protein encoded by Lpin1 was<br/>named lipin. Lpin1 mRNA was expressed at high levels in adipose tissue and was induced<br/>during differentiation of preadipocytes. These results indicated that lipin is required for<br/>normal adipose tissue development and provided a candidate gene for human lipodystrophy.<br/>Through database searches, mouse and human EST and genomic sequences with similarities<br/>to Lpin1 were identified. These included two related mouse genes (Lpin2 and Lpin3) and<br/>three human homologs (LPIN1, LPIN2, and LPIN3). Human LPIN1 gene has been mapped to<br/>2p25.; linkages of fat mass and serum leptin levels to this same region have been noted.<br/>Human LPIN2 and LPIN3 mapped to chromosomes 18p11 and 20q11-q12, respectively. The<br/>mouse genes encoding Lpin1, Lpin2, and Lpin3 mapped to chromosome 12, 17, and 2,

respectively. [provided by RefSeq, Jul 2008]

#### Synonyms:

LIPN3L; SMP2

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LPIN3 ([RC215286], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LPIN3. Positive lysates [LY411469] (100ug) and [LC411469] (20ug) can be purchased separately from OriGene.
