# Product datasheet for TA805583M

# PKC nu (PRKD3) Mouse Monoclonal Antibody [Clone ID: OTI3D8]

## Product data:

Product Type:	Primary Antibodies
Clone Name:	OTI3D8
Applications:	IHC, WB
Recommended Dilution:	WB 1:500, IHC 1:150
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG2b
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 300-508 of human PRKD3 (NP_005804) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Gene Name:	protein kinase D3
Database Link:	<u>NP_005804</u> <u>Entrez Gene 75292 MouseEntrez Gene 23683 Human</u> <u>O94806</u>

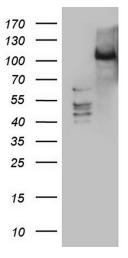

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### STANDARIGENE PKC nu (PRKD3) Mouse Monoclonal Antibody [Clone ID: OTI3D8] – TA805583M

Background:Protein kinase C (PKC) is a family of serine- and threonine-specific protein kinases that can be<br/>activated by calcium and the second messenger diacylglycerol. PKC family members<br/>phosphorylate a wide variety of protein targets and are known to be involved in diverse<br/>cellular signaling pathways. PKC family members also serve as major receptors for phorbol<br/>esters, a class of tumor promoters. Each member of the PKC family has a specific expression<br/>profile and is believed to play a distinct role. The protein encoded by this gene is one of the<br/>PKC family members. This kinase can be activated rapidly by the agonists of G protein-<br/>coupled receptors. It resides in both cytoplasm and nucleus, and its nuclear accumulation is<br/>found to be dramatically enhanced in response to its activation. This kinase can also be<br/>activated after B-cell antigen receptor (BCR) engagement, which requires intact phopholipase<br/>C gamma and the involvement of other PKC family members. [provided by RefSeq, Jul 2008]

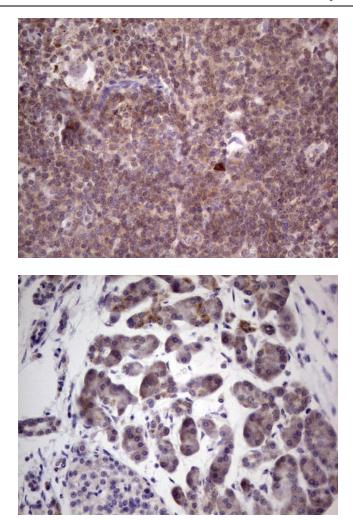

Synonyms:EPK2; nPKC-NU; PKC-NU; PKD3; PRKCNProtein Families:Druggable Genome, Protein Kinase

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PRKD3 ([RC221309], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PRKD3.
