Product datasheet for TA805600AM

Natriuretic Peptide Receptor A (NPR1) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI7H7]

Product data:

| Product Type: | Primary Antibodies |
|-------------------------|---|
| Clone Name: | OTI7H7 |
| Applications: | WB |
| Recommended Dilution: | WB 1:2000 |
| Reactivity: | Human, Mouse, Rat |
| Host: | Mouse |
| lsotype: | lgG1 |
| Clonality: | Monoclonal |
| Immunogen: | Human recombinant protein fragment corresponding to amino acids 746-1006 of human NPR1 (NP_000897) produced in E.coli. |
| Formulation: | PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide. |
| Concentration: | 0.5 mg/ml |
| Purification: | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G) |
| Conjugation: | Biotin |
| Storage: | Store at -20°C as received. |
| Stability: | Stable for 12 months from date of receipt. |
| Predicted Protein Size: | 118.7 kDa |
| Gene Name: | natriuretic peptide receptor 1 |
| Database Link: | <u>NP_000897</u> <u>Entrez Gene 18160 MouseEntrez Gene 24603 RatEntrez Gene 4881 Human</u> <u>P16066</u> |

DORIGENE Natriuretic Peptide Receptor A (NPR1) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI7H7] – TA805600AM

Background: Guanylyl cyclases, catalyzing the production of cGMP from GTP, are classified as soluble and membrane forms (Garbers and Lowe, 1994 [PubMed 7982997]). The membrane guanylyl cyclases, often termed guanylyl cyclases A through F, form a family of cell-surface receptors with a similar topographic structure: an extracellular ligand-binding domain, a single membrane-spanning domain, and an intracellular region that contains a protein kinase-like domain and a cyclase catalytic domain. GC-A and GC-B function as receptors for natriuretic peptides; they are also referred to as atrial natriuretic peptide receptor A (NPR1) and type B (NPR2; MIM 108961). Also see NPR3 (MIM 108962), which encodes a protein with only the ligand-binding transmembrane and 37-amino acid cytoplasmic domains. NPR1 is a membrane-bound guanylate cyclase that serves as the receptor for both atrial and brain natriuretic peptides (ANP (MIM 108780) and BNP (MIM 600295), respectively). [supplied by OMIM, May 2009]

| Synonyms: | ANPa; ANPRA; GUC2A; GUCY2A; NPRA |
|-------------------|---|
| Protein Families: | Druggable Genome, Protein Kinase |
| Protein Pathways: | Purine metabolism, Vascular smooth muscle contraction |

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY NPR1 (Cat# [RC209267], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-NPR1(Cat# [TA805600]). Positive lysates [LY424461] (100ug) and [LC424461] (20ug) can be purchased separately from OriGene.
