|             | Lipin 1 (LPIN1) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1B7] –<br>TA805973AM   |
|-------------|--|
| Background: | This gene encodes a magnesium-ion-dependent phosphatidic acid phosphohydrolase<br>enzyme that catalyzes the penultimate step in triglyceride synthesis including the<br>dephosphorylation of phosphatidic acid to yield diacylglycerol. Expression of this gene is<br>required for adipocyte differentiation and it also functions as a nuclear transcriptional<br>coactivator with some peroxisome proliferator-activated receptors to modulate expression of<br>other genes involved in lipid metabolism. Mutations in this gene are associated with<br>metabolic syndrome, type 2 diabetes, and autosomal recessive acute recurrent<br>myoglobinuria (ARARM). This gene is also a candidate for several human lipodystrophy<br>syndromes. Alternative splicing results in multiple transcript variants encoding distinct<br>isoforms. Additional splice variants have been described but their full-length structures have<br>not been determined. [provided by RefSeq, May 2012] |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LPIN1 ([RC207138], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LPIN1. Positive lysates [LY407897] (100ug) and [LC407897] (20ug) can be purchased separately from OriGene.
