Entrez Gene 9685 Human

Q14677

**Background:** This gene encodes a protein with similarity to the epsin family of endocytic adapter proteins.

The encoded protein interacts with clathrin, the adapter protein AP-1 and phosphoinositides. This protein may be involved in the formation of clathrin coated vesicles and trafficking

between the trans-Golgi network and endosomes. Mutations in this gene are associated with a susceptibility to schizophrenia and psychotic disorders. Alternate splicing results in multiple

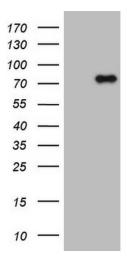

transcript variants. [provided by RefSeq, Sep 2010]

Synonyms: CLINT; ENTH; EPN4; EPNR

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CLINT1 ([RC202387], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CLINT1. Positive lysates [LY402360] (100ug) and [LC402360] (20ug) can be purchased separately from OriGene.
